Flora Vista only has 1 day capacity. Mutual only has 5 days. Are we planning to provide bottled water if they cannot get more water from their supplier?

David,

Below are answers we have been able to pull together so far.

Ronnie

## LAB

The lab we are scheduled to use is Test America located in Savannah, Georgia. Region 8 samples will also be sent to this lab.

## ADVISORIES

The attached advisory is all that we have received at this point. According to NMED, there are additional advisories that they are trying to get a copy of. NMED said that fish and game issued one and NMED also issued one. They will then forward when they get a copy.

## **WATER SYSTEM CAPACITY**

The five water systems with intakes into the Animas and San Juan rivers are: Aztec domestic, North Star Water Users Association, Morningstar water supply system, Farmington water system, Lower Valley water users association. Southside Mutual Domestic, Upper La Plata WUA , and Flora Vista do not have intakes in either Animas or San Juan Rivers but they purchase water from Aztec, Farmington and or Lower Valley WUA. Southside Mutual Domestic and Flora Vista have a water source that is in addition to the water that they purchase. The number of days of water available estimates for the systems selling water to Southside Mutual Domestic, Upper La Plata WUA, and Flora Vista assume that they continue selling to those systems. Southside Mutual Domestic, and Flora Vista number of days of water available estimates assume that they can no longer purchase the same quantity of water as prior to the event. We are still trying to obtain additional information about Upper La Plata WUA system capacity.
